

FERRUM - \$FRM

TGH SUMMARY

Ferrum network is a low cap Defi project empowering individuals with world class financial products that will run on Ferrum's DAG-based interoperability network. Ferrum's interoperability network can connect to nearly any blockchain and works natively with fiat currencies. It's similar to the lightning network, but for every blockchain.

Ferrum already has a live app in Africa with thousands of users and hundreds of merchants, as well as early FRM utility through its token bridge, smart staking and social mining. Ferrum will launch the revolutionary unifyre wallet with in-app staking, "link drops" and decentralized private key backup. We expect that once Ferrum progresses and unifyre gets the exposure it needs to inherit mass adoption that the price will pick up dramatically and any investors who bought sub 5m market cap will benefit, especially if Ferrum delivers on its roadmap.

\$FRM Achieves a TGH Grade 5 (Exceptional)

Market cap at time of find – 1m

Circulating Supply - 127,434,981 FRM

Total Supply - 329,218,749 FRM
