

StockSwap Review (\$STONK)

TGH SUMMARY

StockSwap is an up and coming protocol that has the potential to alter the way the stock exchange works worldwide. In traditional markets, the stock exchange has extremely limited times for trading, and not everyone is allowed to buy or sell stocks in the first place. There are significant barriers of entry, and the markets themselves are entirely centralized, which means that there is a huge market potential to be converted into Defi. Legacy markets have approximately \$49 Trillion in combined assets, the potential can't be underestimated.

StockSwap differentiates itself from other decentralized stock exchanges on the blockchain because synthetics are not used in their ecosystem. Instead of creating synthetic tokens representative of stocks, StockSwap has each stock available on the platform actually backed by a real world stock. Real world backing brings a higher level of security to the StockSwap platform, and lets anyone interact instantaneously with the stock market, at any time, from anywhere on the planet. In a world that is quickly moving to the blockchain, StockSwap has found a great way to bring the centralized world of finance to Defi, and their journey has only just begun.

STOCKSWAP PLATFORM

StockSwap itself has just begun, and already the team have built a crisp, clean interface for users. The chart integration was done with TradingView, giving users access to all the different indicators that they would use traditionally. Charting is extremely smooth while interacting with indicators and settings, and as more stocks are integrated, the better the platform will get. Presently, StockSwap offers trading on AAPL, the GME, and Tesla, with many more to come!

If you notice at the top, there's also an indicator stating when the market closes. The indicator is there to show you that even if you can't trade on traditional markets, you can trade with StockSwap! At present, the platform only allows trades during open hours, but stay tuned for 24/7 trading options. The indicator is a subtle yet effective reminder of how StockSwap will improve upon the legacy systems. World-wide adoption of blockchain technology is picking up speed by the day, and \$STONK is well placed to not only accelerate the process, but absorb a significant amount of the capital from normal markets.

By clicking the "Register to Begin Trading" button, users can begin the process of applying to trade. Since the project is still in its early stages, limitations on trading are in place in order to manage risk in the early stages of the protocol. As liquidity increases, risk is minimized, and the protocol is upgraded, trading will be available in larger quantities and 24/7.

Disclaimer: Users must pass KYC requirements in order to participate in trading stocks on StockSwap. The goal is to make the stock market totally decentralized in the future, but at present, KYC is still required.

TOKEN USE CASES

The \$STONK token is an integral part of the StockSwap ecosystem, and is required in order to buy and sell wStocks on the platform. Since the \$STONK token is required to actually use the platform, there will always be inherent buy pressure to take advantage of the stocks available! At present, you only need to hold 200 \$STONK to be eligible to trade on StockSwap.

Holding 200 \$STONK will also give users access to early releases, and will give them a voice in the decision making process for the ecosystem! For example, if there's a new stock that you want added to the platform, you can use your tokens to vote on the integration. Beyond adding new stocks, users can also vote for new features and new rewards, letting them be a part of a transparent ecosystem that will give power to its users.

The advantages of using StockSwap over a traditional stock exchange, and even other crypto stock protocols, are summarized in the following points:

- StockSwap is live 24/7 while the regular market is only open for 6.5 hours a day
- Significantly faster trades via StockSwap than traditional markets
- Fractional shares are inherent in the protocol, allowing you to buy fractions of shares versus whole shares
- wStock can be directly sent to another person anywhere in the world, unlike normal stocks that are not easily transferrable
- Each wStock is backed by an actual stock, it's not a synthetic token, which gives investors direct interaction with the markets in live time, all the time
- Since each wStock is backed by a real stock, investors can have peace of mind when buying, selling, or holding long term
- StockSwap aims to create a truly decentralized stock market that is distributed and secure, moving away from the heavily centralized legacy systems
- In the future, users will be able to stake their \$STONK to gain access to premium features on the platform

TOKENOMICS

Total Supply:	1,000,000 \$STONK
Private Sale:	100,000 \$STONK
Public Presale:	100,000 \$STONK
Reward and LP incentives:	500,000 \$STONK
Liquidity:	250,000 \$STONK
Marketing/Development:	50,000 \$STONK

The tokenomics for StockSwap have been prepared so that the raise from private and public presales were not excessive, while leaving a significant supply for rewards and LP incentives. Additionally, with 250K of the total supply put into liquidity, and 500K more to be added via incentives, StockSwap's token design will be beneficial for both short term and long term growth.

THE TEAM

The team behind StockSwap is well known in the space! You've likely heard of their work done with BlockDuelers and NFTLootBox, and they're back to bring us another brilliant protocol. Tyler and Benjamin are the leads of the project, with Tyler as the core contract developer and Benjamin as their top tier designer! James and Jackson are two additional developers that are responsible for the smooth UI and seamless UX. Altogether, these 4 combined are a powerhouse of a team that aim to bring a decentralized stock exchange to the masses.

After seeing their previous work with BDT and Loot, we have no doubt that the StockSwap team will continue to build and create the StockSwap protocol to their utmost ability. The markets should be accessible to everyone in a decentralized, secure manner, and this team has the ability to make that a reality.

ROADMAP

April has already been a busy month, with multiple goals completed according to timeline! The team has been actively developing and constantly upgrading the site and the protocol to give users a better experience. May and June also host significant goals like adding new stocks, 24 hour trading, BSC or Matic integration, and much more. Be sure to follow their socials to stay up to date!

RESOURCES

Ticker: \$STONK

Total Supply – 1,000,000

Circulating Supply – 225,000

Decimals – 18

CATALYSTS

- LIVE trading on AAPL, the GME, and Tesla!
- New website and UI release for the end of April
- Only decentralized stock exchange backed by real stocks
- The potential market for a decentralized stock exchange is \$49 trillion (the marketcap of the entire legacy system)
- Fully diluted marketcap for STONK is approximately \$2.7 million
- Live on Uniswap as of April 9th
- New stocks to be added in May alongside 24/7 trading!
